Coastal Salinity Prevention Cell

AN INITIATIVE OF TATA TRUSTS, AKRSP(I) AND ACF

WaSH
(Water, Sanitation
and Hygiene)

WaSH in Coastal Gujarat

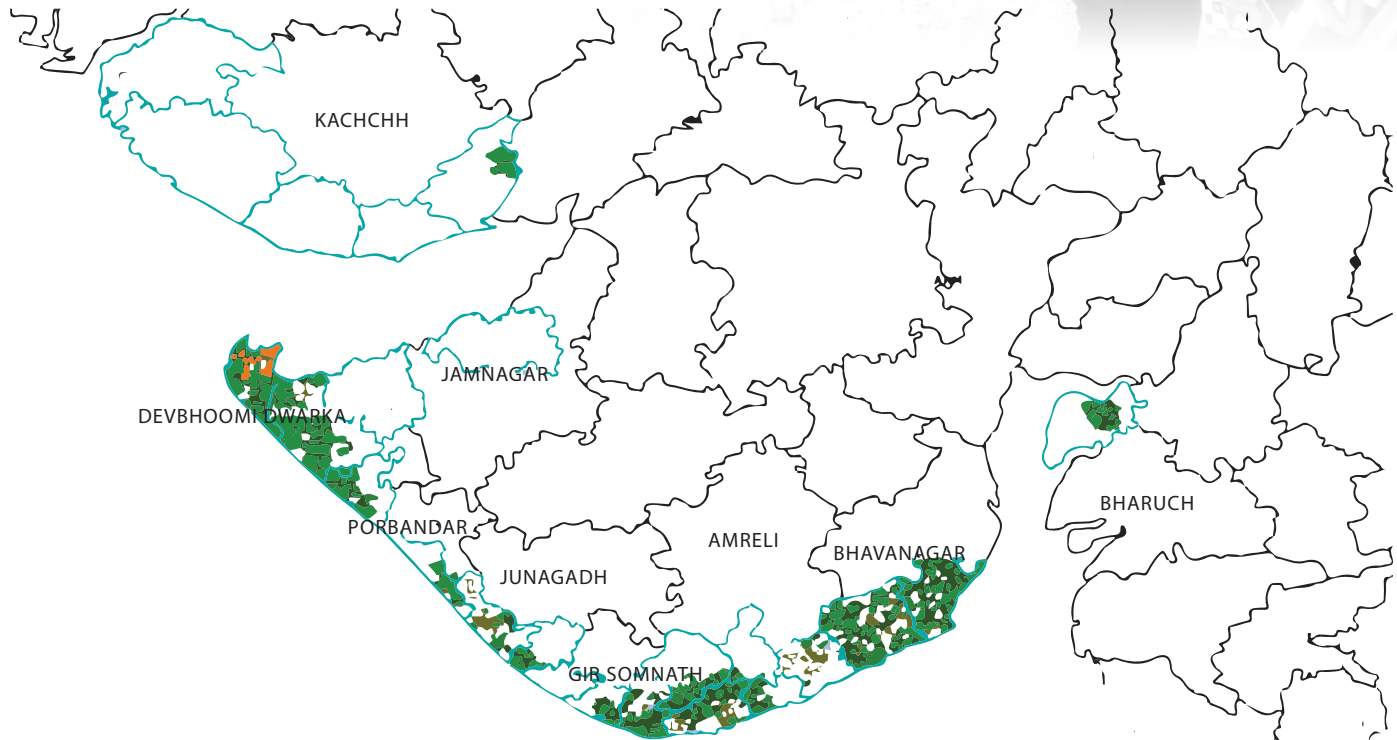

The community faces severe problems when it comes to the consumption of seawater for their basic sanitation and hygiene requirements. Our initiatives help the community not just access to potable water but also manage their resources efficiently to be able to lead a clean, sustainable life along the coast.

Our efforts are primarily aimed towards:

- Securing access to safe drinking water for the rural communities
- Enabling sustainable sanitation practices

The intervention is designed to ensure availability of safe drinking water and sanitation facilities across **500 coastal villages**, spread across **21 talukas** of nine districts, namely Ahmedabad, Anand, Amreli, Bharuch, Bhavnagar, Jamnagar, Junagadh, Porbandar and Rajkot.

- Drinking Water & Sanitation
- Livelihood and Drinking Water - Sanitation
- Livelihood, Drinking Water - Sanitation and Education

Highlights

4,000 RRWHS

promoted with the help
of WASMO and NGO
partners

WaSH in Schools programme
started in

38 schools to benefit
around **5,000 students**

Drinking water source
strengthening through
construction of

**23 water harvesting
structures**

720 water filter

units promoted for
potable drinking water at
the point of use

Achievements

56,000 households provided with sanitation facilities

30-40 minutes time duly saved per household due to sanitation facility

78,102 households provided with safe drinking water

436 villages impacted through WaSH interventions

Achievements

Household water supply availability has increased from **5% to 31.2%**

Data base created on **1,200** villages on water quality, livelihood patterns and key developmental issues

Families using household level RRWHS for drinking water has increased from about **3% to 11%**

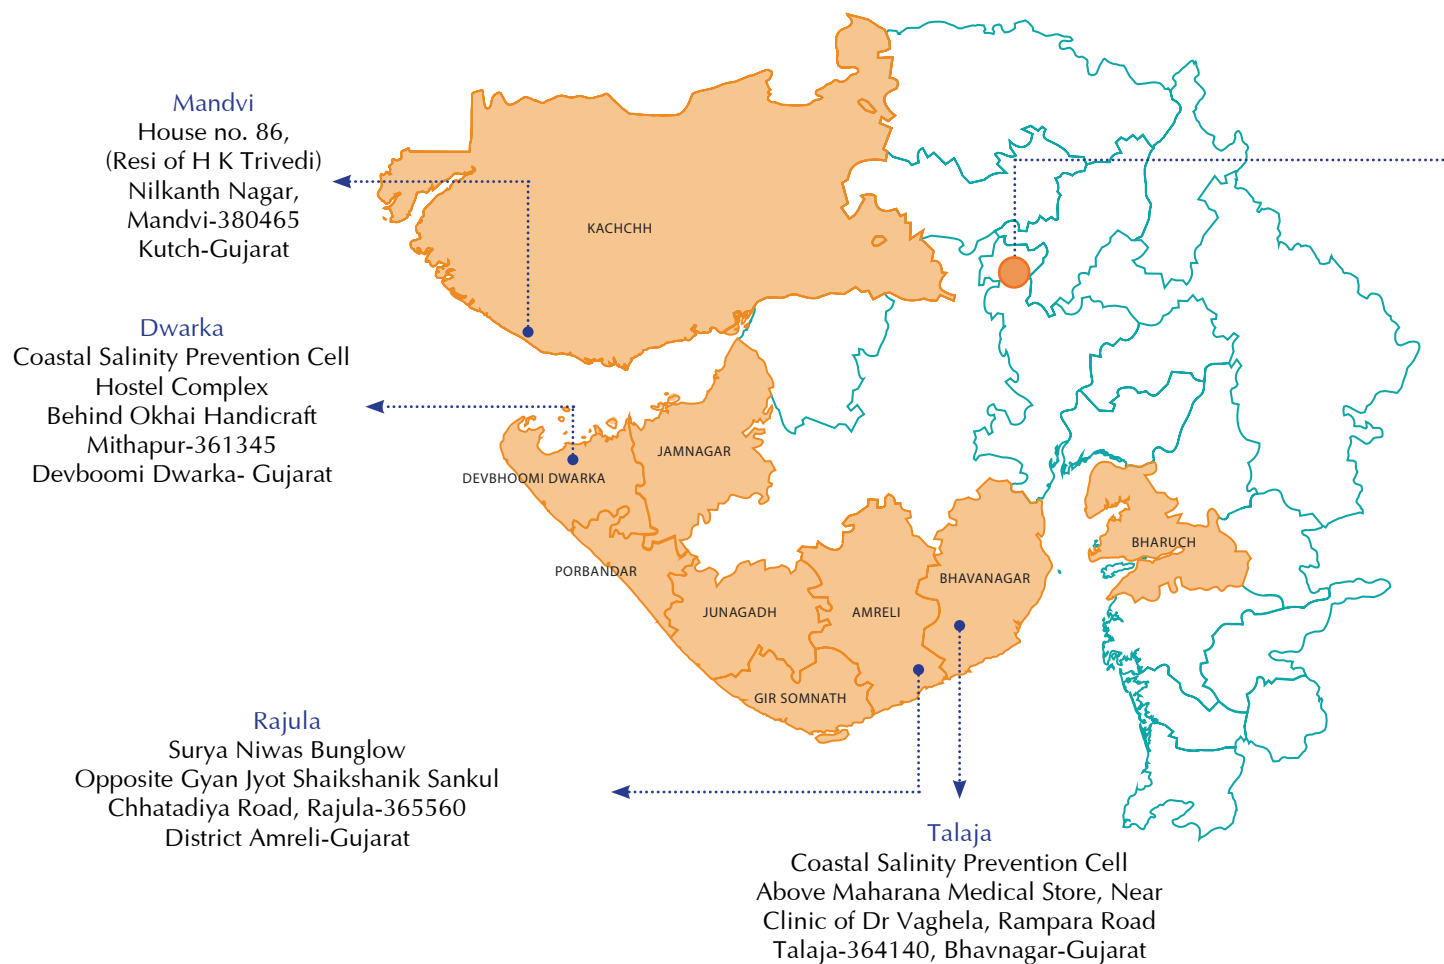

1.5% to 6% Increase in Chlorination at household level

Our efforts over the years have had significant social impact on the households like increased convenience for guests, better marriage proposals and increased demand generation from women for sanitation.

Improved hygiene, reduction in health issues, enhanced privacy and saving on time are the major notable positive impacts of household sanitation units are considerable positive outcomes.
